TEST REPORT NO 594447/25/GDY

2) The reported expanded uncertainty of measurement has been estimated according to ISO 19036 and is based on the standard uncertainty multiplied by the coverage factor k=2 with a confidence level of 95%. The composite standard uncertainty was taken as equal to the standard deviation of within-laboratory reproducibility.

3) Client requirements.

The results refer only to the samples received and tested. When a measurement uncertainty is given, it is an expanded uncertainty estimated for a coverage factor k=2 at 95% confidence level and is not including sampling uncertainty, unless otherwise stated. When the conformity is stated J.S. Hamilton Poland Sp. z o.o. applies the simple acceptance decision rule in accordance with ILAC-G8:09/2019, unless otherwise reported. If the "result" column contains a record: "<" or ">", it means, that it is the test outcome directly related to the lower or upper limit of the measuring range of the method. If an expanded measurement uncertainty is given for such a test outcome, it relates only to the lower or upper limit of the measuring range of the method, respectively. In the case where the Laboratory base on the obtained test outcome, "statement of conformity" column presents an opinion and interpretation.
